INTERCEPT Technology™

Intercept box L180 for letters and postcards
The box with active protection against ageing and oxidation

15 years' protection against ageing

The L180 box actively protects your collection from ageing and oxidation thanks to the INTERCEPT® material inside. Ideal for protecting paper, coins and medallions. Stockbooks and stockcards

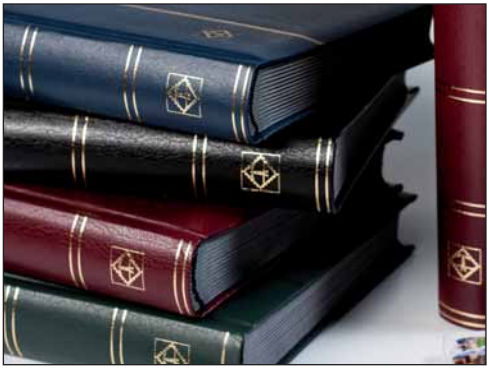
When we mention stockbooks, we refer to stamp albums with card pages featuring horizontal glassine or film strips, into which the stamps are inserted. Even if part of the collection is stored elsewhere, e.g. in illustrated albums, stockbooks can serve as storage space for duplicates, as a mobile solution e.g. for trading or to accommodate the most valuable pieces in a deposit box and are an essential piece of kit for philatelists.

On the following pages, you will find over 70 different varieties to match every taste and use. Please choose the size of your stockbook, the colour of the card, the number of pages and the material and colour of the binding.

More information about the characteristics and suitability of our sheets is available on our website at www.leuchtturm.com.

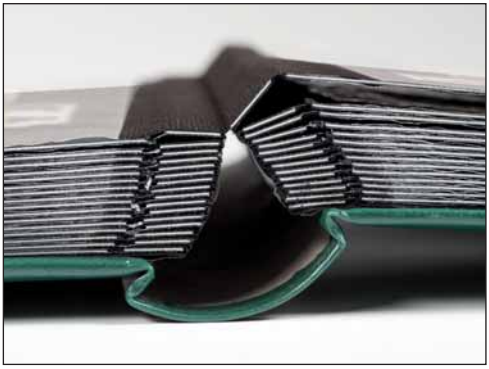
Brand quality made by LIGHTHOUSE

Please be aware of the subtle differences between our stockbooks when making your selection:



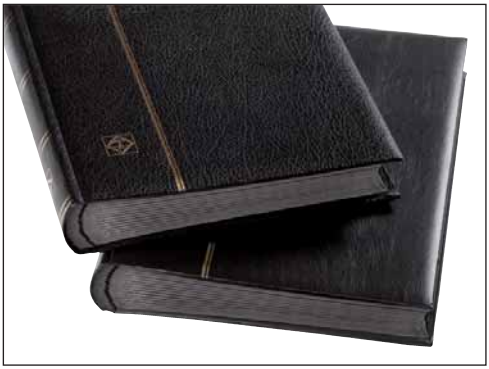
Embossed gold strips give the cover a sophisticated look.

Double-sided interleaves (glassine or clear film) guarantee optimum protection for your stamps.



Tried and tested **double-hinged binding (DLH)** means pages lie flat (doesn't unlock).

High-grammage card.



Hard-wearing **leather* or leatherette cover.**

* **LEFA** = bonded leather material consisting of leather fibres and other sustainable natural raw materials.

Matching **slipcases** are available separately for COMFORT, COMFORT DELUXE, PREMIUM and LEATHER formats (see following pages).

LEFA = **Le**ather **fa**brics (bonded leather) is a bookbinding material consisting of leather fibres and other sustainable, natural raw materials (natural tanning agents, natural latex, natural fats and dyes).

By felting the leather fibres, the LEFA material has almost all the important characteristics of natural leather. No other material comes so close to natural leather in terms of quality and workmanship as LEFA.

The LEFA cover material we use is characterised by optimum physical characteristics (tensile strength, strong seams, durability, tear resistance, etc.).

Only high-quality and carefully selected raw materials are used for LIGHTHOUSE products in order to ensure the desired product characteristics.

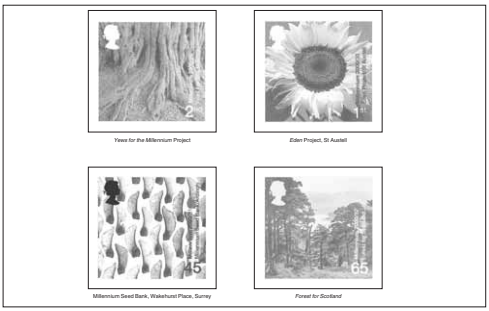
The advantages of LIGHTHOUSE illustrated albums

LIGHTHOUSE prints its album pages (size 270 x 297 mm/13-hole system) on non-ageing wood and acid-free card (170 g/m²) in high-resolution black and white offset print. Colour printing is consciously avoided. This allows you to immediately spot the missing stamps in your collection. SF mounts in sizes which match the stamps, made from clear, anti-glare polystyrene film, free from chemical softener are glued to the card of the albums. The mounts hold the stamps securely in place and prevent them from sticking. They also optimally protect your collection from dust and damage.

Many LIGHTHOUSE illustrated album pages are also available without SF protective covers in a "regular" version.

The individual characteristics of similar stamps which vary in e.g. colour, perforation or printing process are noted on the respective album sheets. This only applies to stamps with MICHEL (major) numbers and includes the year where required.

In this way we always ensure an aesthetically pleasing overall presentation.



Superior black and white print quality – you can immediately spot the missing stamps in your collection.

Optimum protection for your stamps using the appropriate SF mounts (100% polystyrene, free from chemical softeners and stabilisers).

13 punched holes, meaning sheet remains in position in the binder, elongated punched holes to ensure sheets remain flat.

Sheets match 4 different binder types (springback binder, turn-bar binder and screw binder).

LB sheets are card sheets in album format which come with a welded protective pocket. The film for our LB sheets is made from 100% polystyrene. Leading archives and museums worldwide recommend polyester for the long-term storage of stamps, records and other valuable documents. The practical LB system with all its different combinations of strips and pockets was developed after years of research and careful study of collectors' needs. With the LB pages you can give your collection that special personal look. They are particularly useful for topical collections or adding special items to existing country albums. You can design any combination or grouping you desire. Mint sheets, maxi-cards, FDCs, booklets, singles, block souvenir sheets, even postal stationery. The blank system is also ideal for storing and displaying new stamps prior to receiving your new supplements.

Overall size of the LB page is: 270 x 297 mm (10 5/8 x 11 3/4").

Did you know?

Magnifiers with 2–3X magnification

These magnifiers are suitable for viewing whole stamps and coins. The image found on the object can be easily viewed with their help and the fine details become visible. These magnifiers can also be used as a reading aid.

Magnifiers with 5–7X magnification

The majority of details can now be identified. Unfortunately, increased magnification of the diameter lens also means reduced reading surface. The distance between the eye and the magnifier as well as between the magnifier and the object is minimised.

Magnifiers with 10–20X magnification

You are now very close to the Collectors' piece with this magnification and the smallest details are visible. Individual pixels can be differentiated for the majority of printing processes. You can't get a finer detail than this.

Microscopes

Intaglio printing becomes more vivid, microprinting can now be viewed more easily and safer, and plate flaws are more easily detectable.

Digital microscopes

Thanks to digital technology, stamps and coins can be viewed on the screen. The software provided allows you to capture images of the objects, save them and edit the image.

Light

A good source of light is vital but not always available. LED technology now gives light to even the smallest of magnifiers so that objects being viewed are well illuminated. You can now purchase LEDs with long-wave UV light for identifying fluorescence.
